

ASTROCAT

$ASTCAT - Solana

WHITEPAPER

The golden astronaut cat.
A meme token that publishes every step.

Version 1.2 - October 2026
https://astrocat-presale.vercel.app

1. Introduction

ASTROCAT ($ASTCAT) is a community meme token on the Solana blockchain, led by a golden astronaut cat. It was born with a simple conviction: in a market full of tokens that promise and never deliver, ASTROCAT does the opposite. Every step of the project is published as it happens, on the official website and channels, where anyone can check it.

ASTROCAT is currently in its presale phase and the token has not been created yet. This whitepaper describes the project exactly as it stands today, including what is still pending. Nothing here is a promise of profit.

2. Utility: the ASTROCAT mini game

Unlike most presales, ASTROCAT already has working utility before the token exists: a mini game in which the astronaut cat dodges asteroids, in the style of the classic tap-to-fly arcade games. It is free and playable today, inside Telegram and on the web, with high scores that players can share with friends.

When the token is created, playing will earn a very small fraction of $ASTCAT, paid from a dedicated Game Rewards allocation of 500,000,000 $ASTCAT (5% of supply). This pool is reserved and locked exclusively for the mini game: it is never sold, it never enters the presale or the liquidity, and it is never spent on anything else. It is set aside from day one so that the game's prize truly exists and never depends on future promises; once the token is created, the pool's address will be published so anyone can verify it only ever moves to reward players. These rewards are symbolic by design: the game exists for fun and community, not as a source of income.

3. Tokenomics

Total supply: 10,000,000,000 ASTCAT (10 billion), fixed at creation. The supply is distributed as follows:

Allocation	Share	Tokens	Purpose
Presale	40%	4,000,000,000	Sold in the public presale on the official website
Liquidity	30%	3,000,000,000	Initial liquidity pool at launch
Community & Promotion	10%	1,000,000,000	Promotions and community activities
Game Rewards (mini game)	5%	500,000,000	Reserved exclusively for mini game player rewards; never sold or used for any other purpose
Team	10%	1,000,000,000	Project development and operations
Reserve	5%	500,000,000	Future needs and contingencies

4. The presale

The presale is manual and transparent, and runs only on the official website. Its terms are public and fixed:

- Presale price: 0.00001 USDT per ASTCAT.
- Soft cap: 1,000 USDT. If the soft cap is not reached, every buyer is refunded in full.
- Payments: SOL or USDT on the Solana network, to the official project wallets published on the website, with wallet confirmation on the page or by manual transfer to the published addresses.
- Distribution: after the presale, buyers are reviewed and tokens are sent to the same wallet that paid.
- Open access: there is no whitelist. No hard cap is published; the maximum that can be sold is the full presale allocation (40% of supply).

What a purchase buys at the presale price:

You pay	You receive
10 USDT	1,000,000 ASTCAT
20 USDT	2,000,000 ASTCAT
50 USDT	5,000,000 ASTCAT
100 USDT	10,000,000 ASTCAT

5. Roadmap

The route is public. Dates are announced on the official channels as each step is confirmed; until then they are shown as to be announced (TBA).

1. Token creation (TBA)

The $ASTCAT token is created on Solana with the supply and distribution in this document.

2. Presale on the official addresses (TBA)

Buyers send SOL or USDT to the official wallets published on the website.

3. Buyer review (TBA)

Payments are checked and matched to the buyer's wallet.

4. Token distribution (TBA)

Buyers receive their $ASTCAT in the same wallet that paid.

5. Liquidity (TBA)

The liquidity allocation (30%) is used to open the initial pool.

6. Launch (TBA)

Public trading opens.

7. Mini game rewards (TBA)

Playing the mini game starts earning tiny fractions of $ASTCAT from the reserved Game Rewards allocation (5% of supply, locked exclusively for the game).

6. Transparency and safety

- The token is not created yet. The contract address will be published only on the official website and channels; anything published elsewhere is not official.
- No KYC and no third-party audit have been performed at this stage, and the project's listing profiles state this openly.
- ASTROCAT will never DM you first, never ask for payments outside the official website, and never ask for your seed phrase or private keys.
- Always check the wallet addresses on the official website before sending anything.

7. Risks

$ASTCAT is a meme token. Its price can be highly volatile and may fall to zero. Cryptocurrencies are not regulated in the same way as traditional investments, and participating in a presale carries a real risk of losing the full amount paid. This document is information only: it is not financial advice and not a promise of returns. Only participate with money you can afford to lose.
